

Wall of Light Effect for EGO ERAM moderator for Paint.Net

I'm going to try and give you some hints to help you get started:

1. Open Fig1 in Paint.NET
2. Add a new layer 
3. Select the Paint Bucket tool  and left click in the new layer to fill it with black.
4. Open Layer Properties (press F4) and lower the Opacity to around 174.
5. Activate the Rectangle select tool  and drag out a square selection (hold down the Shift key = forces the selection to be square)
6. Press the M key twice - or select the Move Selection tool  right click and drag with the shift key held down to rotate the selection 45 degrees.
7. With the selection still active, activate the Gradient tool 
8. Expand the Colors Window (Click More button). Lower the transparency (of the Primary color = black) to around 12.
9. Right click at the top of the selection and drag downwards. The selection should fade from white to virtually transparent. Stop dragging 1/2 of the way down the selection.

You should end up with something like this:

That at least will give you something to build ideas on
